

CDLA-MIX

BEFORE AND AFTER MILKING, THE PERFECT MIX!

CDLA-MIX

THE PERFECT MIX: LACTIC ACID AND SODIUM CHLORITE

Here is the pre- and post-milking teat dip solution which possesses highly powerful disinfectant properties due to chlorinated oxidants created by the reaction between two mixed ingredients. Lactic acid and sodium chlorite generate chlorous acid and then chlorine dioxide, which are very effective against teat germs notably bacteria, viruses, yeast and protozoa.

ADVANTAGES :

- Rapid effectiveness in just 15 seconds
- Long-lasting action for up to 12 hours
- Contains 10% glycerin
- Provides effective protection and shield at the teat sphincter opening
- Remains highly effective even in the presence of organic matter or dirt on the teats before milking or milk residue after milking
- High percentage combination of emollients and exfoliating ingredients accelerates healing and recovery of injured or damaged teats
- No residue in the milk
- Very easy to clean at the next milking
- Unique coloring that helps clearly see which teats have received the teat dip, does not stain
- Iodine-free
- Applicable with a sprayer, foaming cup, or dip cup

PRODUCT FORMATS :

ACTIVATOR

- 4 liters
- 10 liters
- 20 liters
- 55 liters
- 200 liters
- 1040 liters

BASE

- 4 liters
- 10 liters
- 20 liters
- 55 liters
- 200 liters
- 1040 liters
