IODINE-BASED TEAT DIP

JF-2022

IODINE-BASED TEAT DIP

JF-2022 is the result of several years of research to meet the needs of producers for a teat dip with 1% iodine that can be applied as a spray and also hydrates the teat. To achieve effective protection and hydration, we use a combination of several emollients derived from cosmetics, including lanolin, propylene glycol, and Zemea®. Its name is a tribute to our late colleague and friend Jean-François Lemay (1981-2022).

ADVANTAGES :

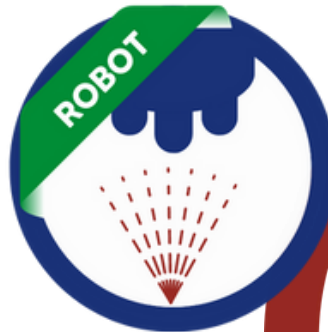

- Applicable to robot milking systems
- Allows optimal teat hydration in winter
- Combination of emollients from cosmetics
- Adheres well to the teat
- Effective upon application

PRODUCT FORMATS :

- 20L 104642- 336
- 55L 104642-354
- 200L 104642-581
- 1040L 104642-582

DIN :

02533146
